

IonCleanse® Enhancement System

Imagine a list of chemicals and toxins that have been introduced in the past hundred years. We are literally inundated. When we step out in the city we are ingesting heavy metals from exhaust. When we eat processed foods we are ingesting preservative, dyes and hydrogenated oils. Fresh fruits and vegetables have been treated with pesticides. Meats and dairy -- saturated with hormones and antibiotics. Chemicals invade our homes in the guise of household cleaners, anti-bacterial soaps and air fresheners. The carpet, furniture, draperies and upholstery in our cars are often treated. Medications and supplements are filled with inert ingredients. We can not escape the constant barrage of chemicals in the modern world. Our bodies absorb them and bog down, clogging our natural filtration systems. Think of a fish tank filter. What does it look like after a month? Now imagine what your liver or kidneys look like.

The IonCleanse® Enhancement System helps us make adaptations to the inundation of chemicals in our environment by aiding in the detoxification process. Bob Moroney explains, "The machine sends a small direct current into the array. The different metals in the array along with the water and salt generate positively and negatively charged ions by separating the water into oxygen and hydrogen. An ion is a charged atom that has gained or lost an electron, and creates a magnetic field capable of neutralizing oppositely charged particles. This creates an osmotic field that neutralizes and pulls toxins out of the body through the skin in the process of osmosis. Positive polarity creates a negative ion flow, which, we believe, raises blood Ph from acidic toward alkaline."

You can discern what part of the body the debris is coming from by the color changes. The water will change color even if there are no feet in the container. This is due to regional toxicity created by chemicals used by the local water authorities, in combination with pollutants common to that area. In Denver, Colorado, for example, the predominant water color is orange and 25% of the residue found in a foot bath is from regional toxins. In addition to the coloration changes, parasites, pinworms, and smelly purple mucous have been observed in the waste water.

The IonCleanse® is not for everyone. You should not use the machine if you:

- Wear a pacemaker or any other battery operated or electrical implant.
- Take heartbeat regulating medications or blood thinners.
- Are a pregnant or lactating woman.
- Are an organ transplant recipient.
- Have undergone organ removal, especially the colon.
- Are on a medication that, if absent from your system, would mentally or physically incapacitate you (e.g., psychotic episodes or seizures).

Care should be taken if you are in any of the following categories:

- On medications that require the blood level be maintained in order to be effective, for example, blood pressure medication. (The IonCleanse® can remove medications from the body for 6 hours.)
- People who have been diagnosed as hypoglycemic. (The IonCleanse® tends to lower blood sugar.)
- If the client is in poor health or has not done any kind of detoxing. (They should reschedule after taking supplements.)

Clients should also be made aware that detox occurs on an emotional level as well. An established support system is recommended.

The machine does not discriminate what it removes. Careful consideration and supplementation are necessary to replenish the system. Electrolytes, salts, enzymes, minerals and heavy metals need to be kept in balance. The detoxification process should be seen as synergistic and include dietary changes, exercise, body and energy work as well as supplementation. "Used properly, the IonCleanse® provides a comfortable and relaxing way to rid the body of toxins and rejuvenate aging organs and glands by balancing the Ph of both the tissues and blood."
